Milestone in Laufenburg: The Technology Center is now growing upwards

Laufenburg, 1 September 2026 – An important milestone has been reached at the construction site of the Laufenburg Technology Center: the extensive excavation works have now been successfully completed. From this point onwards the building will gradually begin to rise above ground.

The foundation is in place. Now we are building the future.

With the completion of the earthworks the foundation has been laid for the next crucial phase. Over the past few months more than 480,000 cubic metres of earth and gravel have been moved to create the foundation for the modern building complex. With structural construction now underway the outlines of the Technology Center are already becoming more visible from week to week.

“The fact that the ERNE Group together with all partners involved was able to complete the excavation work on schedule and without incident is a major achievement for the entire project team,” explains Marcel Aumer, Group CEO, Chairman of the Board and Founder of FlexBase Group.

“Now we are moving ahead at pace: with the construction of the building shell our vision of an innovation campus for energy and technology is taking tangible shape.”

Even before the excavation work was completed construction of the approximately 1.4-metre-thick foundation slab had already begun. Progress on the construction site is clearly visible: more than 98 percent of the total area has been successfully compacted and concreted. This provides the foundation on which the building will continue to rise over the coming months.

A promise from Switzerland and for Switzerland

FlexBase is currently 100 percent Swiss-owned. All shares are held by Swiss owners. Founder Marcel Aumer is the majority shareholder.

What is being developed in the canton of Aargau is pioneering for the energy future of Switzerland, Europe and the world. It is therefore possible that international investors may also acquire a stake in FlexBase in the medium to long term.

The promise: FlexBase will always remain at least 51 percent Swiss-owned. Participation by foreign investors is possible but a foreign majority is not – neither today nor in the future.

An outlook for our neighbours

As construction progresses FlexBase is inviting residents of Laufenburg and Kaisten to take an exclusive look at the construction site. The invitation has already been published and registrations are coming in in large numbers.
